RE: Addendum to my letter regarding inquiry results dated March 1st, 2007

This addendum is a revision of the research results regarding the in-ground precious metals and magnetite as of November 27, 2009 based on one quarter section (160 Acres) at a depth of 1000 feet.

Mineral Dollars Valuation as of November 27, 2009 is \$ 41,956,032,000

The following documentation breakdown is based upon ounces of precious metals as found in a ton of "magnetite soil" and is backed up by reports found in our documents.

Metals	OZ/Ton	\$ per OZ	\$ / Gross
Gold	.565	1197.70	673.88
Silver	.974	18.84	18.35
Platinum	.291	1473.00	428.64
Palladium	.185	371.00	68.64
Rhodium	.098	2650.00	259.70
Magnetite		250/ton	250/ton
Total Per Ton			\$1699.21

The following are the totals of five precious metals plus magnetite at various depths and acres sizes using Market Spot Pricing as of **November 27, 2009** from www.kitco.com

1	Acres @ 100 Ft deep	12,000 Tons @ \$1699.21 =	20,390,520
1	Acres @ 500 Ft deep	60,000 Tons @ 1699.21 =	101,952,600
1	Acres @ 1000 Ft deep	120,000 Tons @ 1699.21 =	203,905,200
160	Acres @ 500 Ft deep	9,600,000 Tons @ 1699.21 =	16,312,416,000
160	Acres @ 1000 Ft deep	19,200,000 Tons @ 1406.19 =	\$32,624,832,000

Using the calculations of ounces per ton and the depth of feet for total in ground precious metals as per "Valuation Report" dated Jan. 3, 2007 coupled with current "spot prices" in the market dated August 3, 2009 and "Valuation" Valuation March 1st, 2009 the total Asset Value available for participation an Investment Program is noted above using normal methods.

In using a new method named the Raimford Process has contributed significantly to liberating the values never before realized. This process and equipment are of a proprietary nature and can not be discussed. This process has unlocked the secrets of Mother Nature and will contribute significantly to the mining operations. The lab report confirm the effectiveness of the Raimford Process. The increase in the value of just Gold and Platinum would be at least \$486.00 per ton of "magnetite soil". The real value is at least **\$41,956,032,000 for one quarter section (160 Acres) at 1000 ft deep.**

Included in this area are the following claims in Pinal County, Arizona, USA. Each Claim is one quarter section:
